Code of ethics for business in Kenya

Kapa Oil Refineries Ltd. signed up to support and implement the Code of Ethics for Business in Kenya in March, 2012. The Code of Ethics is an initiative of the business community through Kenya Association of Manufacturers to promote and enhance ethics and business conduct in Kenya. The code is based on the ten principles of the UN Global Compact as captured in the four thematic areas of Human Rights, Labour Standards, Environment and Anticorruption. The Company has established policies on these areas and not only implement them but also expects business partners to adhere to them and does not replace, but complements, the Company's Code of Ethics.

The Code states:

"We, the Business Community, recognise that ethical business brings about good business. We are committed to play a proactive role in building a globally competitive and prosperous nation, with a high quality of life, as envisioned in Vision 2030."

As good corporate citizens, we commit to treating our stakeholders with respect, to run our businesses with responsibility, to act in compliance with applicable laws, and to be actively involved in corruption prevention. Our commitment to these ethical standards determines our interaction with our stakeholders (that is, our organisations; our shareholders and investors; users of our products and services; our suppliers, contractors and agents; our society; and our state and government) and the environment". As a company, we aspire to live up to the code and adhere to its requirements, basing our company policies on the code and dedicating resources towards achieving aspirations of the code. We shall strive to ensure that our operations serve to strengthen this code.

As a socially responsible and ethical organization, Kapa commits to:

- Treating our stakeholders with respect.
- Run our business responsibly with accountability, integrity, honesty and transparency.
- Act in compliance with applicable laws.
- Be actively involved in the prevention of corruption.

It is our intention, as an organization, to live up to the spirit of the Code of Ethics for business in Kenya and conduct our business in an environment that is ethically sound.

History of Kapa

The name 'Kapa' is an acronym derived from the title 'Karania Packers' which was established in the late 1960's as a salt packaging and baking powder manufacturing company. Karania Packers grew steadily and within a short time, ventured into producing cooking fats and edible oils. As a result, it now became known as Kapa Oil Refineries Ltd. While treading in new territories, Kapa showed its commitment to innovation by being the first manufacturing company to introduce packing of cooking fats in reusable plastic containers; a norm that all cooking fat manufacturers now follow.

As the industry quickly expanded, Kapa steadily acquired more market share. In succession to the cooking fat and edible oils, Kapa started manufacturing a premium detergent powder: 'Toss', that took the detergent powder market by storm. Toss has been and still is the market leader in the detergent powder category. With continual research and development, Kapa saw prospective opportunities in the FMCG industry and proceeded to manufacture different varieties of laundry bar soaps followed by margarine, glycerine and luxury bath soaps.

In 2003, Kapa cemented its commitment to quality by being certified the prestigious ISO 9001:2000 award for its 'Quality Management Systems' in the manufacture of cooking fats, edible oils, margarine, baking powder, laundry soaps and glycerine.

Kapa is proud to be the first company in the manufacturing sector to be HACCP UK certified for its edible oil processes. Kapa takes pride in manufacturing qualitative and affordable end products for its customers. Due to this factor, Kapa has always and keeps enjoying unmatched brand loyalty from satisfied customers.

Kapa's products are now trusted household names, not only in Kenya, but throughout East, Central, West and Southern Africa, as we export our diverse range of products to over 18 African countries serving the COMESA and SADC markets.

Being a consumer health driven company, Kapa believes in the manufacture of safe and healthy edible products. Unlike other cooking fats, oils and margarines in the market, Kapa products are NON-HYDROGENATED. Hydrogenation is a harmful process which alters the composition of raw materials to resemble those of plastic with the addition of trans-fatty acids as a by-product of this process. All our cooking fats and cooking oils are free of hydrogenation thus making them heart-friendly, cholesterol free and beneficial to the health and well-being of all our consumers to resemble those of plastic with the addition of trans-fatty acids as a byproduct of this process. All our cooking fats and cooking oils are free of hydrogenation thus making them heart-friendly, cholesterol free and beneficial to the health and well-being of all our consumers.

Edible Oils
